

Employment

Full Stack Software Engineer	John Hancock	March 2023 - Present
-------------------------------------	---------------------	-----------------------------

- Implemented a new MFA authentication system for the company's login, account management, and registration using React and NodeJS.
- Designed and developed new registration and validation workflows for a new product using React, NodeJS, .NET, and SQL.
- Developed a Node.js API middleware that integrates with LDAP to facilitate the retrieval of user information from Active Directory for authentication and account management.
- Introduced feature flags across all internal applications to enable the gradual rollout of new features and A/B testing, reducing time to production by 10%.
- Mentored junior engineers, guiding them in solving problems efficiently using best practices.
- Updated and maintained legacy applications to meet current security standards using Spring Boot and .NET.

Software Engineer	Microsoft	March 2022 - March 2023
--------------------------	------------------	--------------------------------

- Implemented a follow-topic system for MSN, increasing user engagement for selected topics by up to 27% using React and .NET.
- Created a 'Topics for You' page displaying a custom feed based on user preferences in MSN, increasing ad revenue for topics by 2.4%.
- Member of the Livesite Excellence Crew, providing training, troubleshooting guides, and investigative queries to ensure easier investigation and resolution of live site issues.
- Modified and built API responses to support new features in MSN using .NET.
- Created news carousels for relevant categories on MSN using React.

Software Engineer	Canadian Broadcasting Corporation	April 2019 - March 2022
--------------------------	--	--------------------------------

- Implemented microservices to process thousands of media files per day using Python, RabbitMQ, and Celery.
- Built and maintained an internal monitoring tool for media pipelines, allowing for real-time monitoring of media processing using Angular, Flask, and MongoDB.
- Integrated a continuous deployment system for audio and video broadcasting devices using Ansible, Python, and Jenkins.
- Created workflows that modify and transcode media files for different platforms using FFmpeg and Python.

Education

Montreal, QC	Concordia University	September 2015 - April 2019
---------------------	-----------------------------	------------------------------------

- Bachelor of Software Engineering

Technical Experience

Projects

- **Yahoo Fantasy Analyzer:** Analyzes Yahoo Fantasy Hockey data to provide users with insights on their team's performance. Technologies used: Golang, React, SQL, Redis.
- **Wheel Snipe Celly:** Built a hockey-related blog with Google Analytics to track user impressions. Technologies used: Hugo, JavaScript, Google Analytics. (wheelsnipecelly.info)
- **Crypto Watch:** A crypto portfolio tracker allowing users to monitor their investments in real-time. Technologies used: React, Flask, MongoDB.

Languages and Technologies

- React, NodeJS, Python, Golang, .NET, Java, SQL, MongoDB, Redis, RabbitMQ, Celery, Ansible, Jenkins
- English (Mother Tongue), French (Fluent), Portuguese (Proficient)
