Employment

John Hancock

Boston

Full Stack Software Engineer

2023-03 – Present

- Implemented MFA migration away from email across several applications using React and Node.js, improving security standards.
- Integrated TOTP (Time-based One-Time Password) authentication into existing login workflows, enhancing security through multi-factor authentication.
- Introduced feature flags across all internal applications, enabling A/B testing and lowering time to production by 10%.
- Engineered a new API middleware to facilitate the integration between LDAP and various in-house applications, bolstering data accessibility and interconnectivity.
- Lead interns and junior developers, reinforcing best practices and effective problem-solving.

Microsoft

Vancouver

Software Engineer

2022-03 – 2023-02

- Implemented a follow-topic system increasing user engagement for selected topics by up to 27% using React and .NET.
- Created a 'Topics for You' page, displaying a custom feed based on user preferences, increasing ad revenue for topics pages by 2.4%.
- Member of the Livesite Excellence Crew, which provided training, troubleshooting guides, and investigative queries, improving time to resolution of live sites by 60%.
- Modified and built API responses to support new features in MSN with .NET.
- Created news carousels for relevant categories on MSN news using React and .NET.

Canadian Broadcasting Corporation

Montreal

Software Engineer

2019-04 – 2022-03

- Implemented microservices to process high-volume media files (10K+ daily) using Python, RabbitMQ, and Celery.
- Built and maintained an internal monitoring tool for media pipelines using Flask, Angular, and MongoDB.
- Integrated a continuous deployment system for thousands of audio and video broadcasting devices using Ansible, Python, and Jenkins.
- Created workflows that modify and distribute large-scale media content to various internal applications using Python.

Skills

Programming: Python, .NET, React, Angular, Node, Java, Golang, HTML, CSS

Technologies: Ansible, Jenkins, MongoDB, SQL, Rabbit MQ, Celery, AWS, Kusto

Languages: English (Mother Tongue), French (Fluent), Portuguese

Technical Experience

Quality Doc

.Net, Angular, SQL

Built a real-time web application for PDF review, management, version control, and statistical analysis for documents within a project or a team.

Wheel Snipe Celly

Hugo, HTML, JavaScript, Scss

Designed and developed a hockey-related blog, including Google Analytics to track impressions made on the page.

wheelsnipeccelly.info

Workout

React, Firebase

Created a workout app that allows users to track and modify their workouts by adding exercises, organizing workout days, and managing complete workout routines.
